

BUILT BIG & TUFF

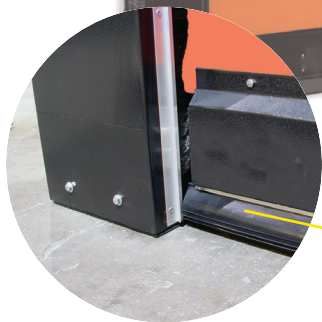

The direct drive operated door is tensioned and balanced by a maintenance free counter balance system.

Full customer support program.

Heavy duty 11 gauge metal frame with baked on enamel finish.

Wireless connection to bottom bar.

Exclusive to SuperSeal, the Super Sensitive reversing edge has been designed with a continuous contact strip along the entire length of the water proof and tear resistant bottom. The temperature has little to no effect on its' sensitivity, reducing service calls.

The heart of the 8500 Series TURBO DRIVE System is a Helical Gear Box with direct drive. No chains or clutches are used for superior reliability. Super Seal utilizes German Technology to deliver 2 to 3 Horse Power (depending on the size of door) to operate at speeds up to 60" per second.

The series 8500 "Super Roll" is the optimum solution for quick access through openings. The Super Roll is designed for high volume, high speed traffic in commercial, industrial, or refrigerated applications. A state-of-the-art microprocessor controlled AC variable speed drive system allows the door to move at faster speeds than conventional doors. The Super Roll provides an effective barrier against energy loss and sound, thereby improving productivity and employee comfort. Super Roll doors are all equipped with standard reversing features for protection against injury.
