

ENERGY EFFICIENCY

PIT BLOCKER

Super-Seal's very own Pit Blocker, not only provide an optimum perimeter seal along face of a dock leveler but also block dirt and debris from falling under dock leveler. This innovative design prevents energy loss and closes off the gaps between the dock leveler and concrete pit walls preventing debris from damaging the dock leveler. Typically concrete pit walls and dock levelers do not include traditional weather seals or under-leveler seals attached to the front of the dock leveler; Pit Blockers prevent the air mass flow from under the leveler from entering the working area, minimizing the transfer of heat and energy into and out of the facility. A perfect addition to a fully functional dock shelter/receiving area.
